Installation of Anaconda and Opencv

An option is to first install Anaconda. Conda is a package manager, which allows for installation python libraries. You need to install Anaconda for Python 3, and opencv 3.

links to on how to download and install Anaconda:

<https://conda.io/docs/install/full.html>

Installing Opencv:

Run the following command on the terminal

```
conda install -c conda-forge opencv=3.2.0
```

or (if the above does not work)

```
conda install -c menpo opencv3=3.2.0
```
